# Snagit Round Table

July 2023

- Question
- Capture a Preset
- Add a new Preset
- Demo 1 by Leo
- Resources

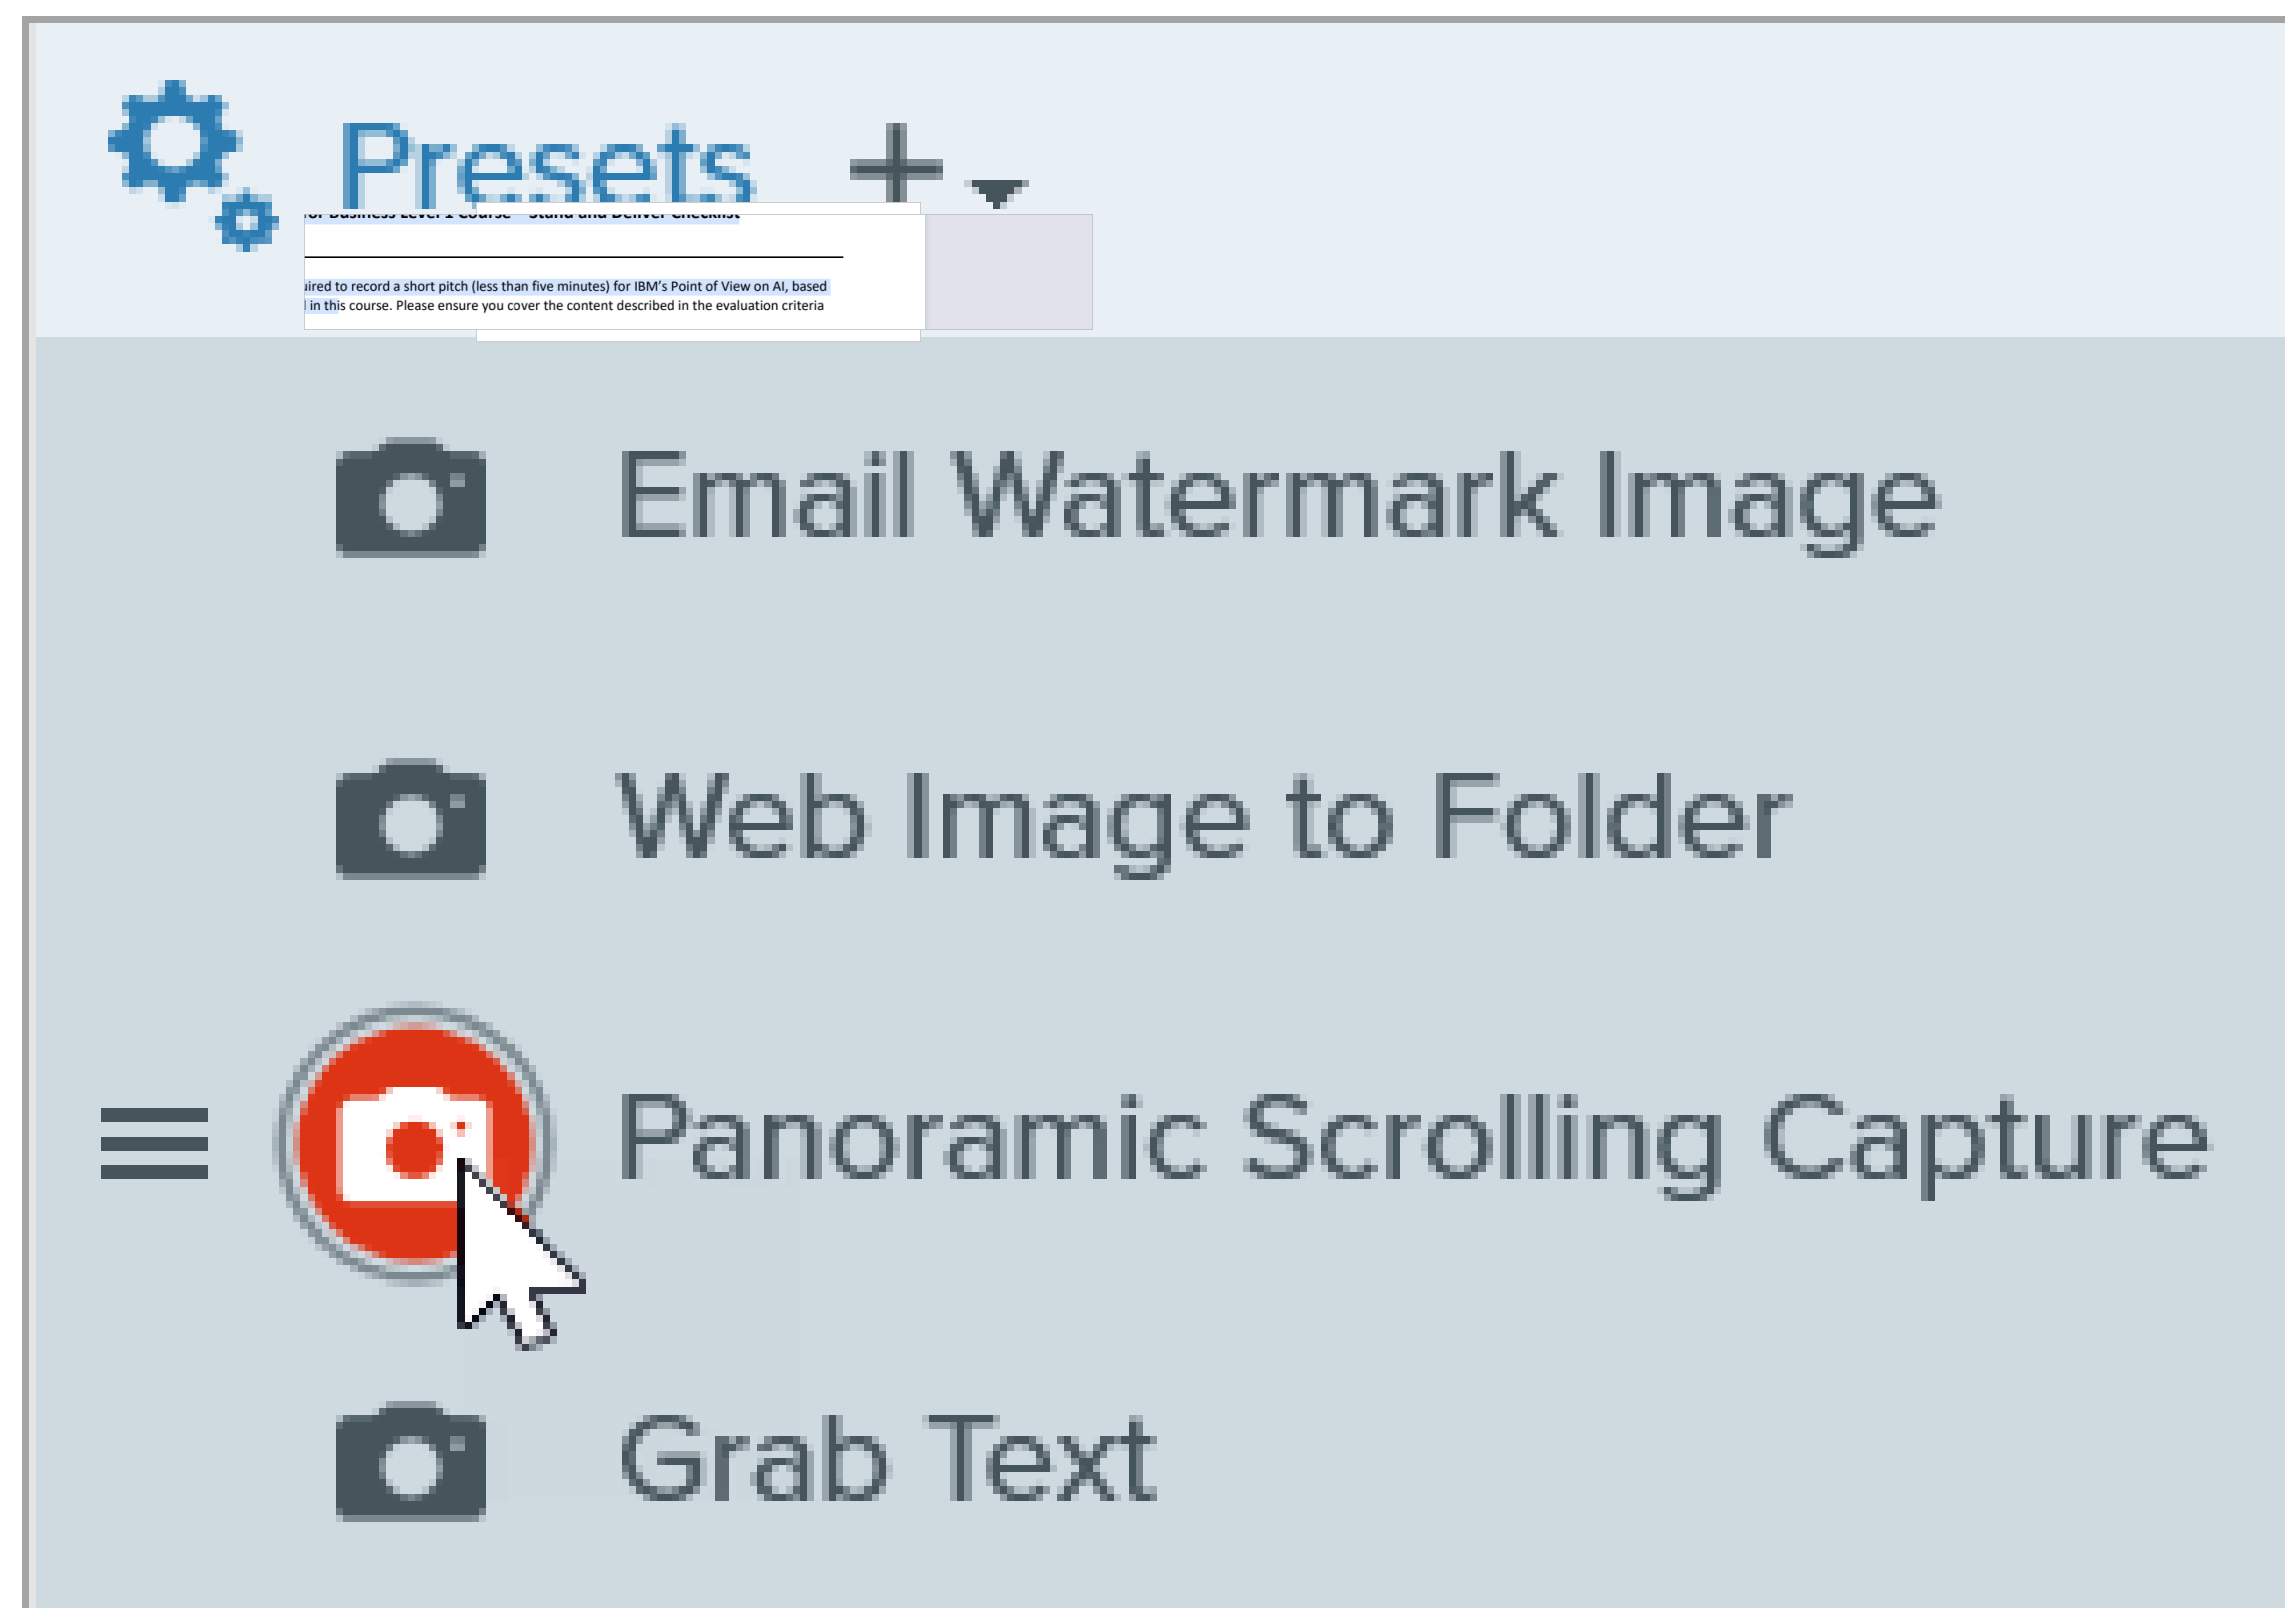

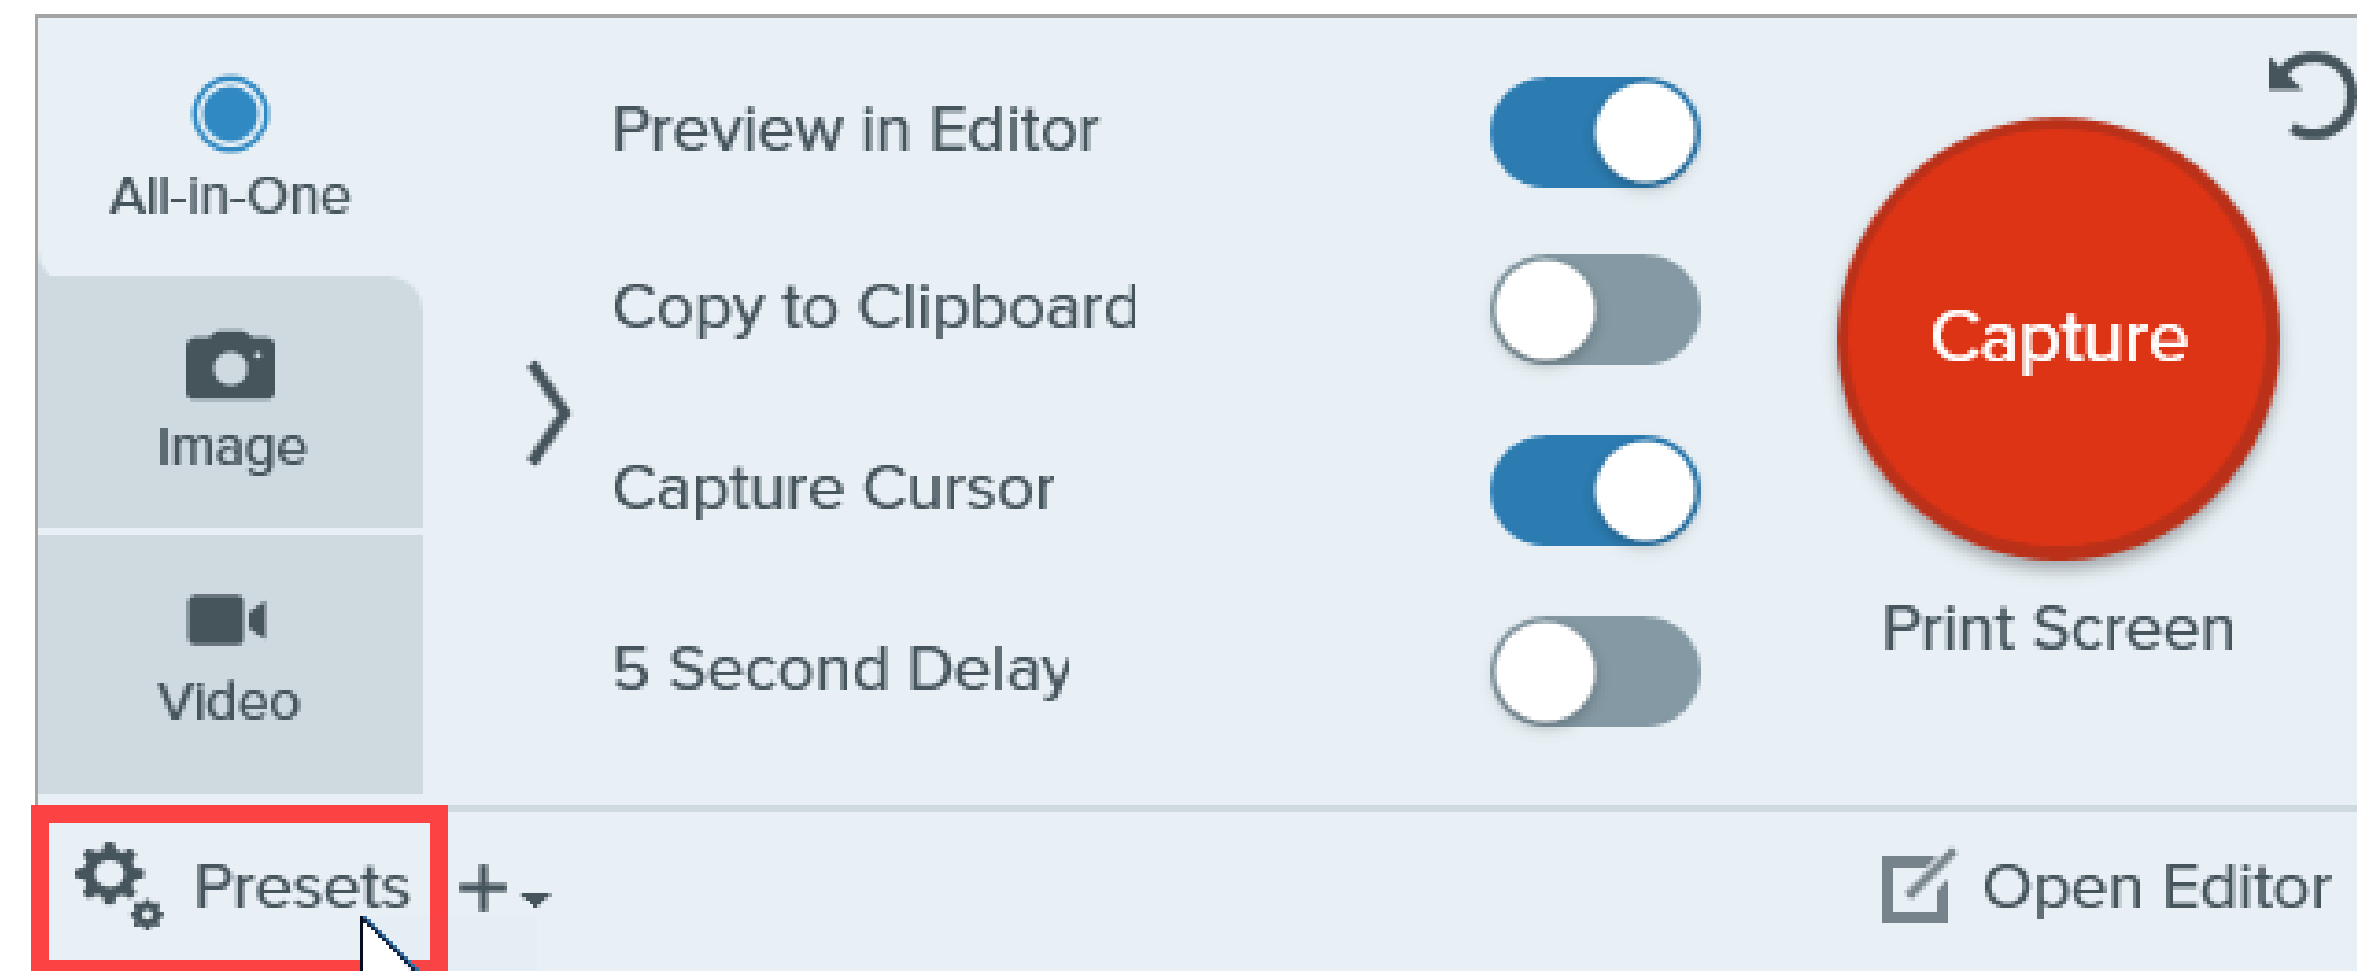

# Question

How can SnagIt assist course developers be more efficient?

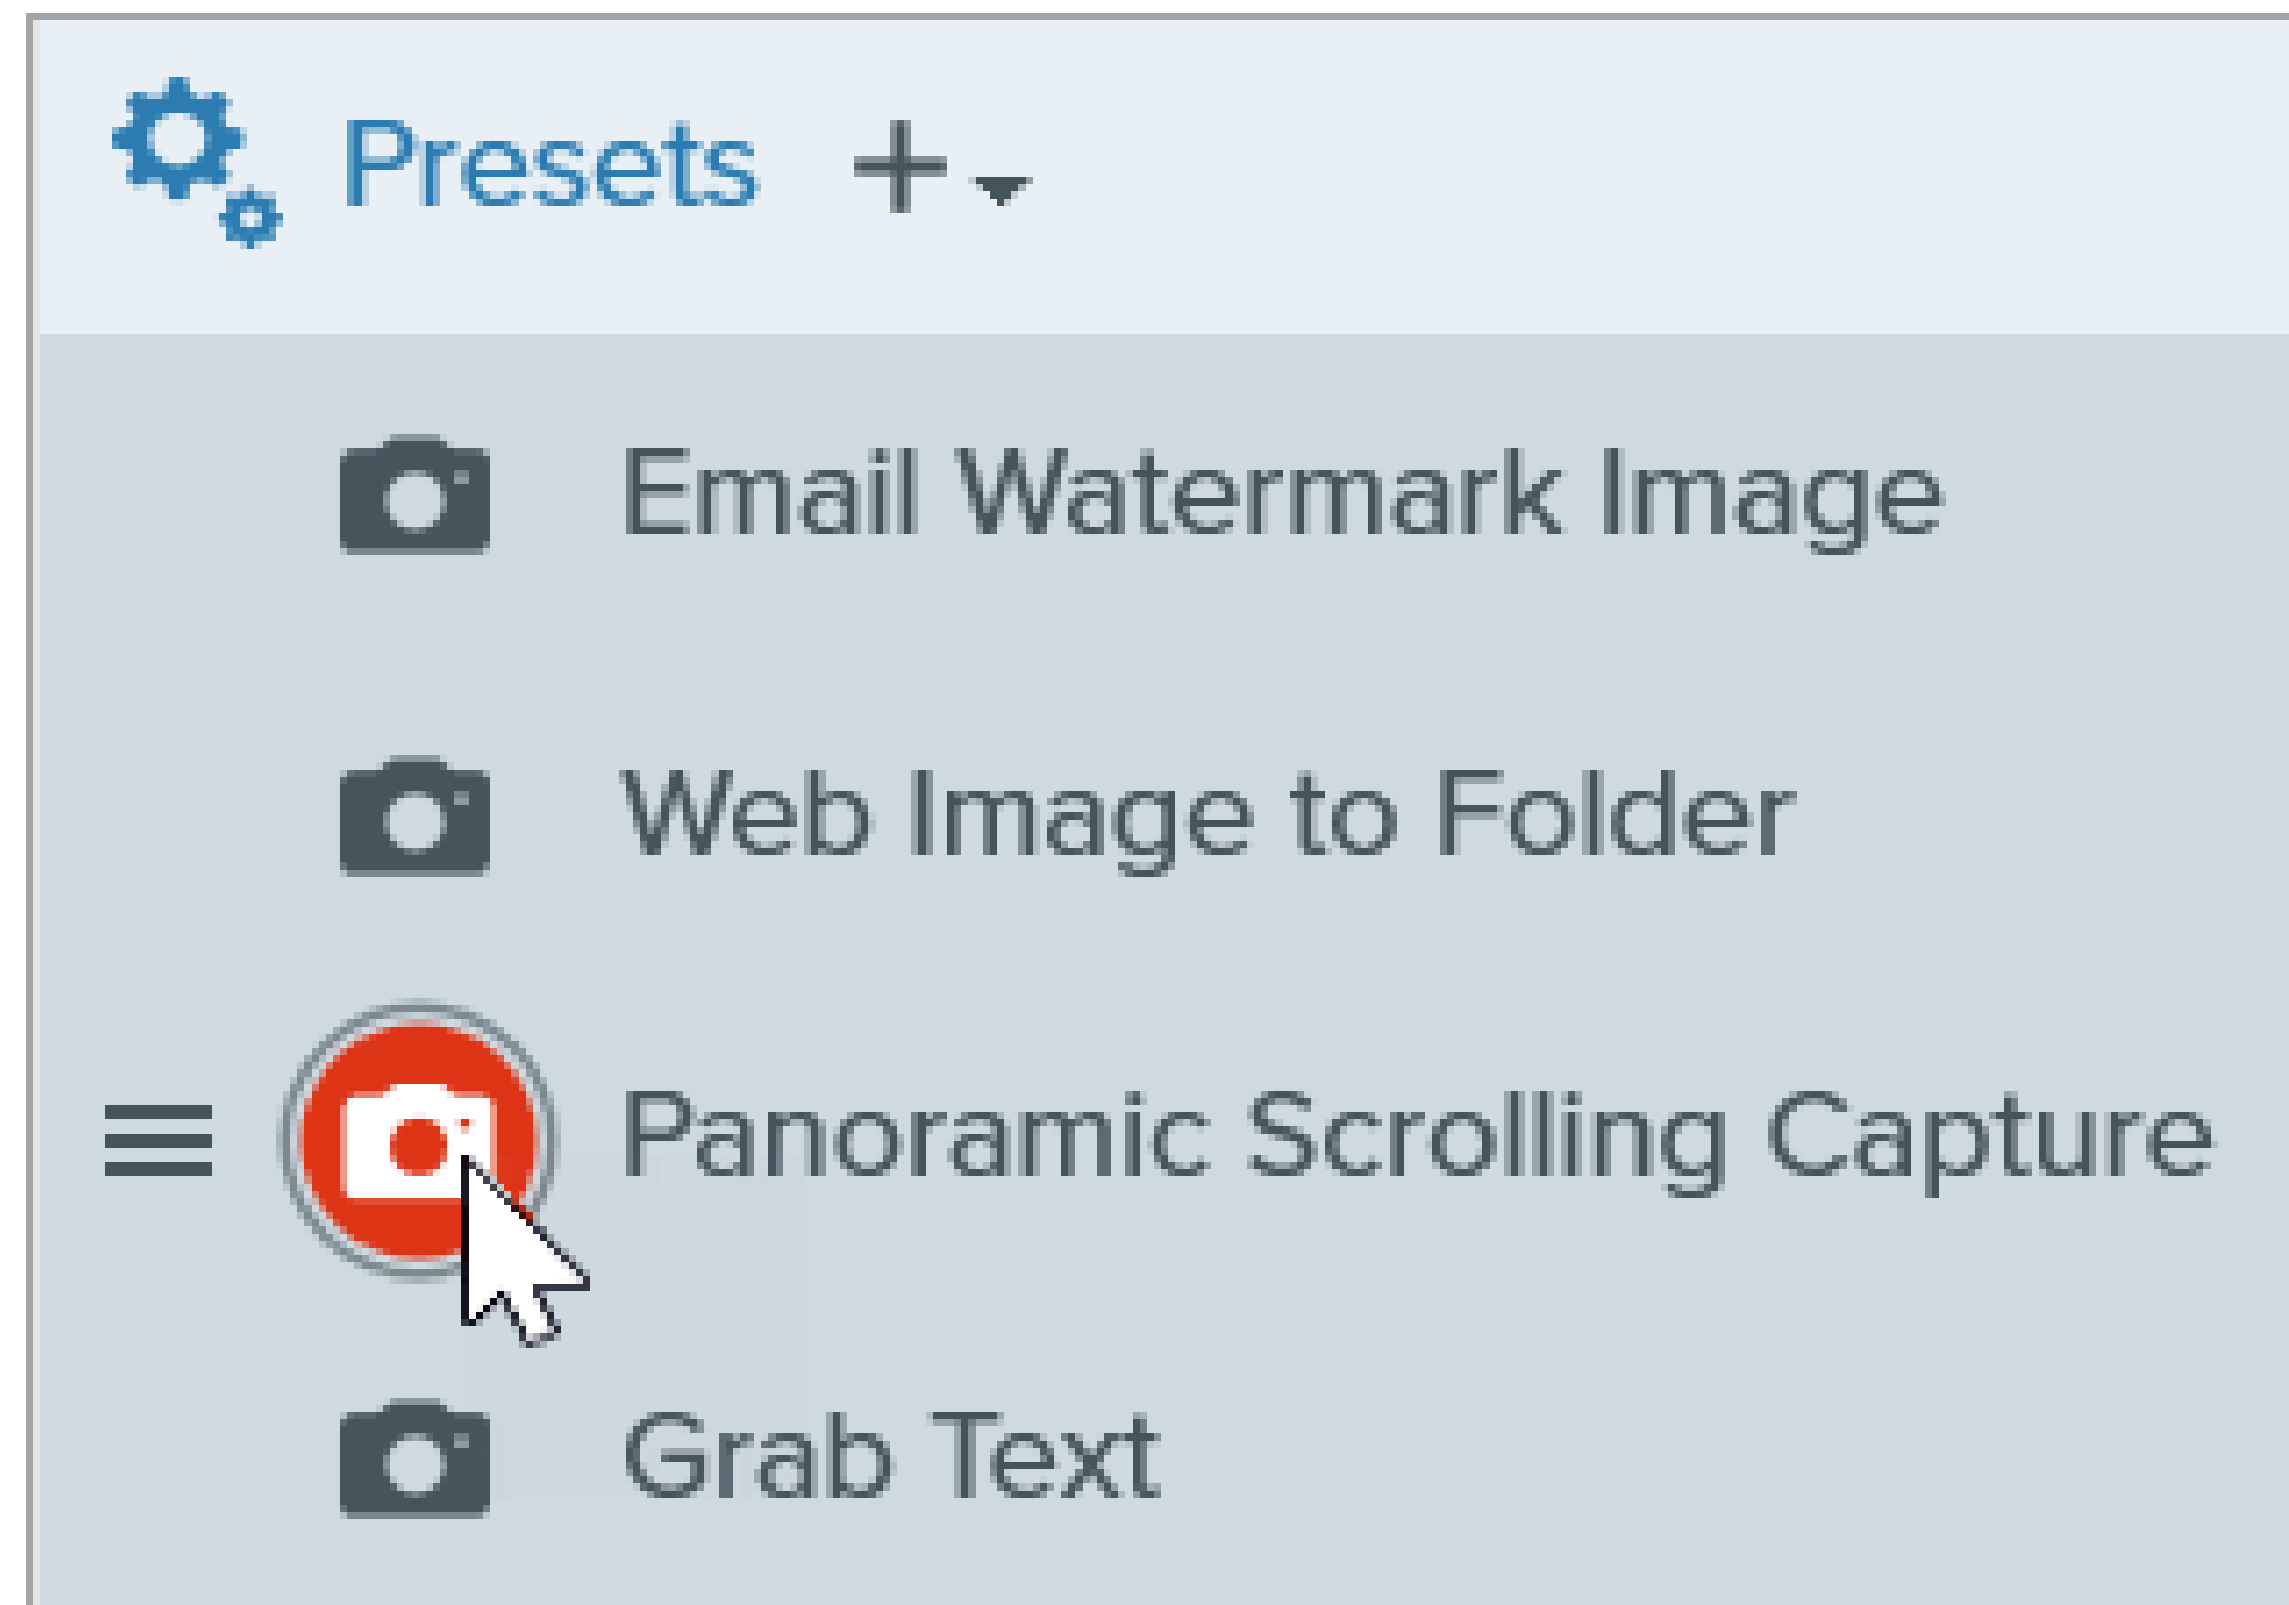

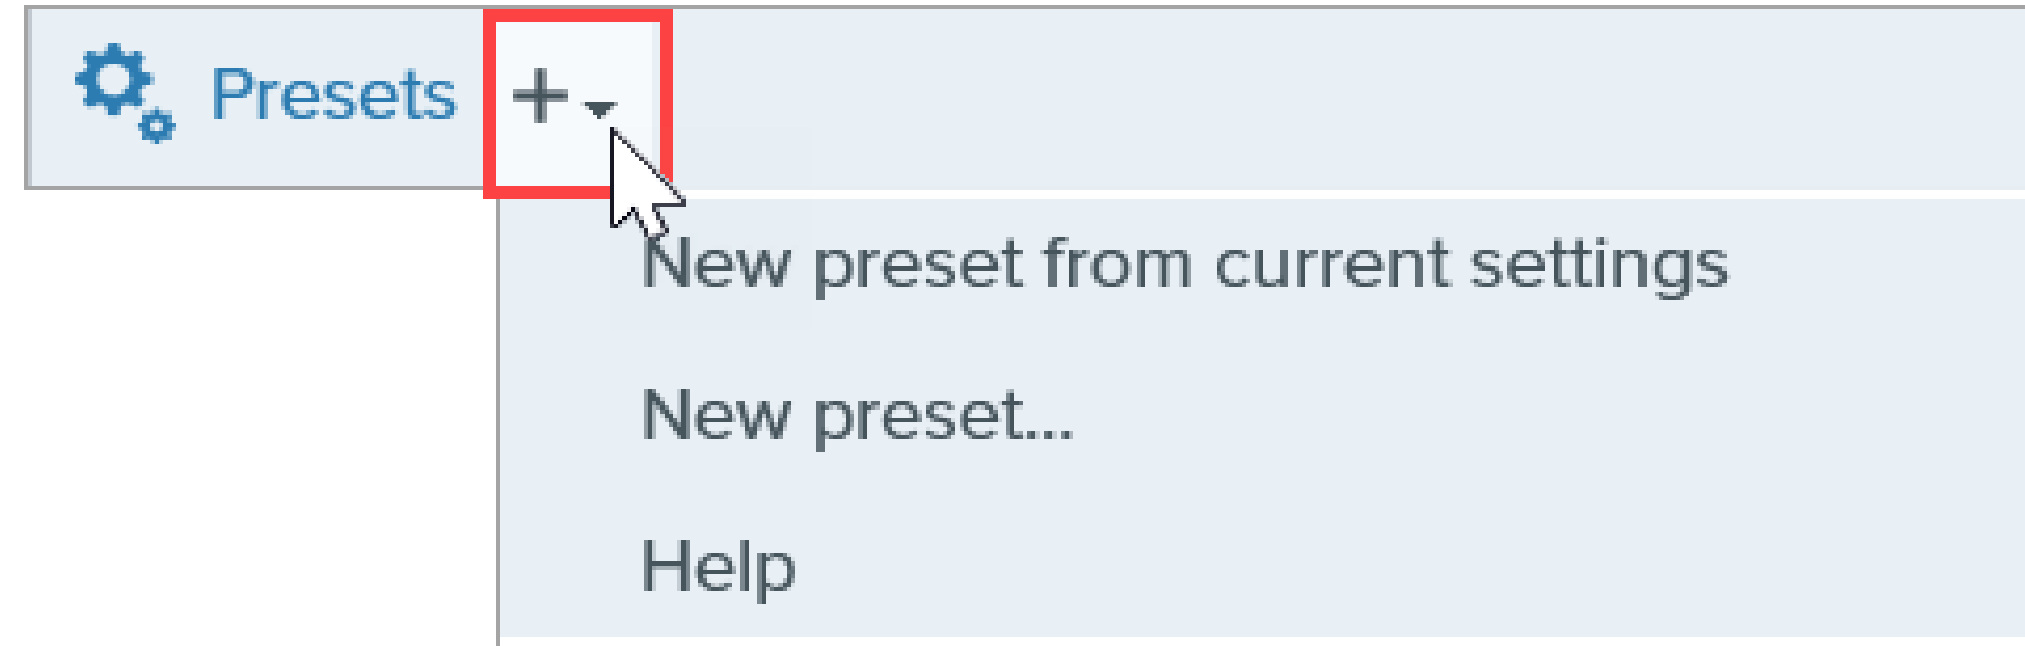

# Capture a Preset

- In the Capture window, click the **Presets** button.
- The list of available presets expands. Hover the cursor over the desired preset until a red **Preset Capture** button appears. Click the button to start the capture
- To assign a keyboard shortcut to a Preset, click the **Add Hotkey** (Windows) or **+ Shortcut** (Mac) field and press the desired key combination on the keyboard.

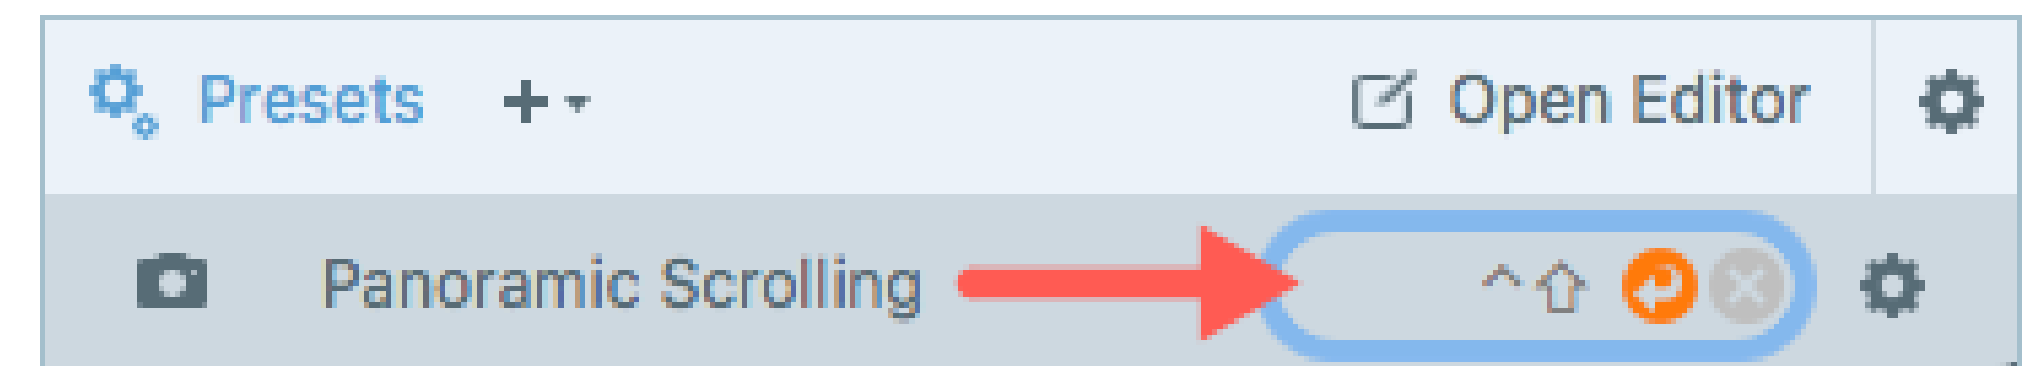

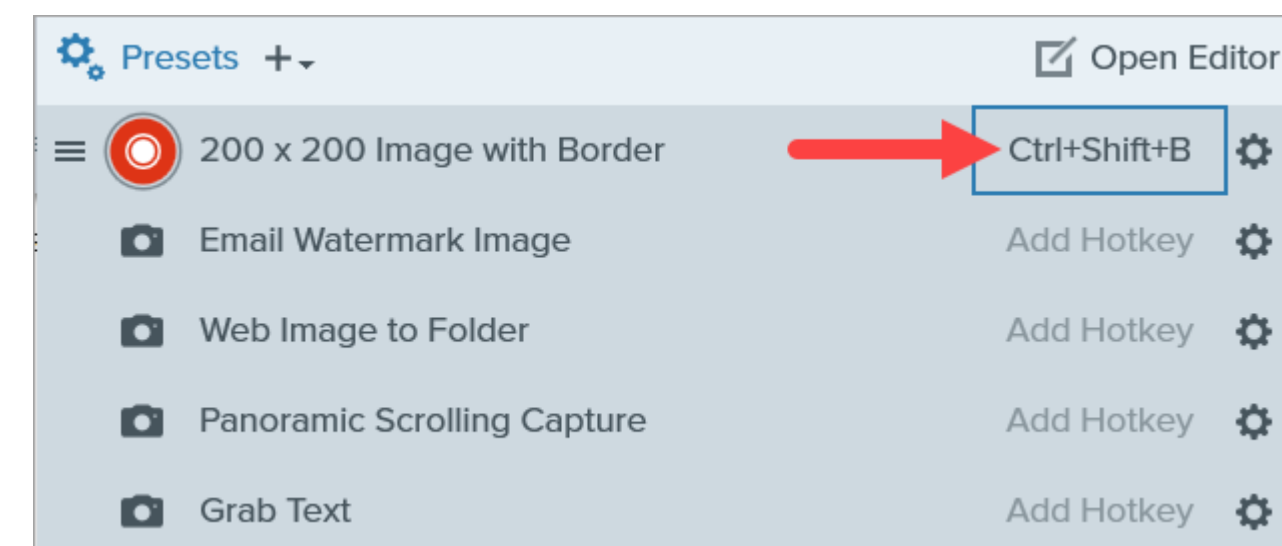

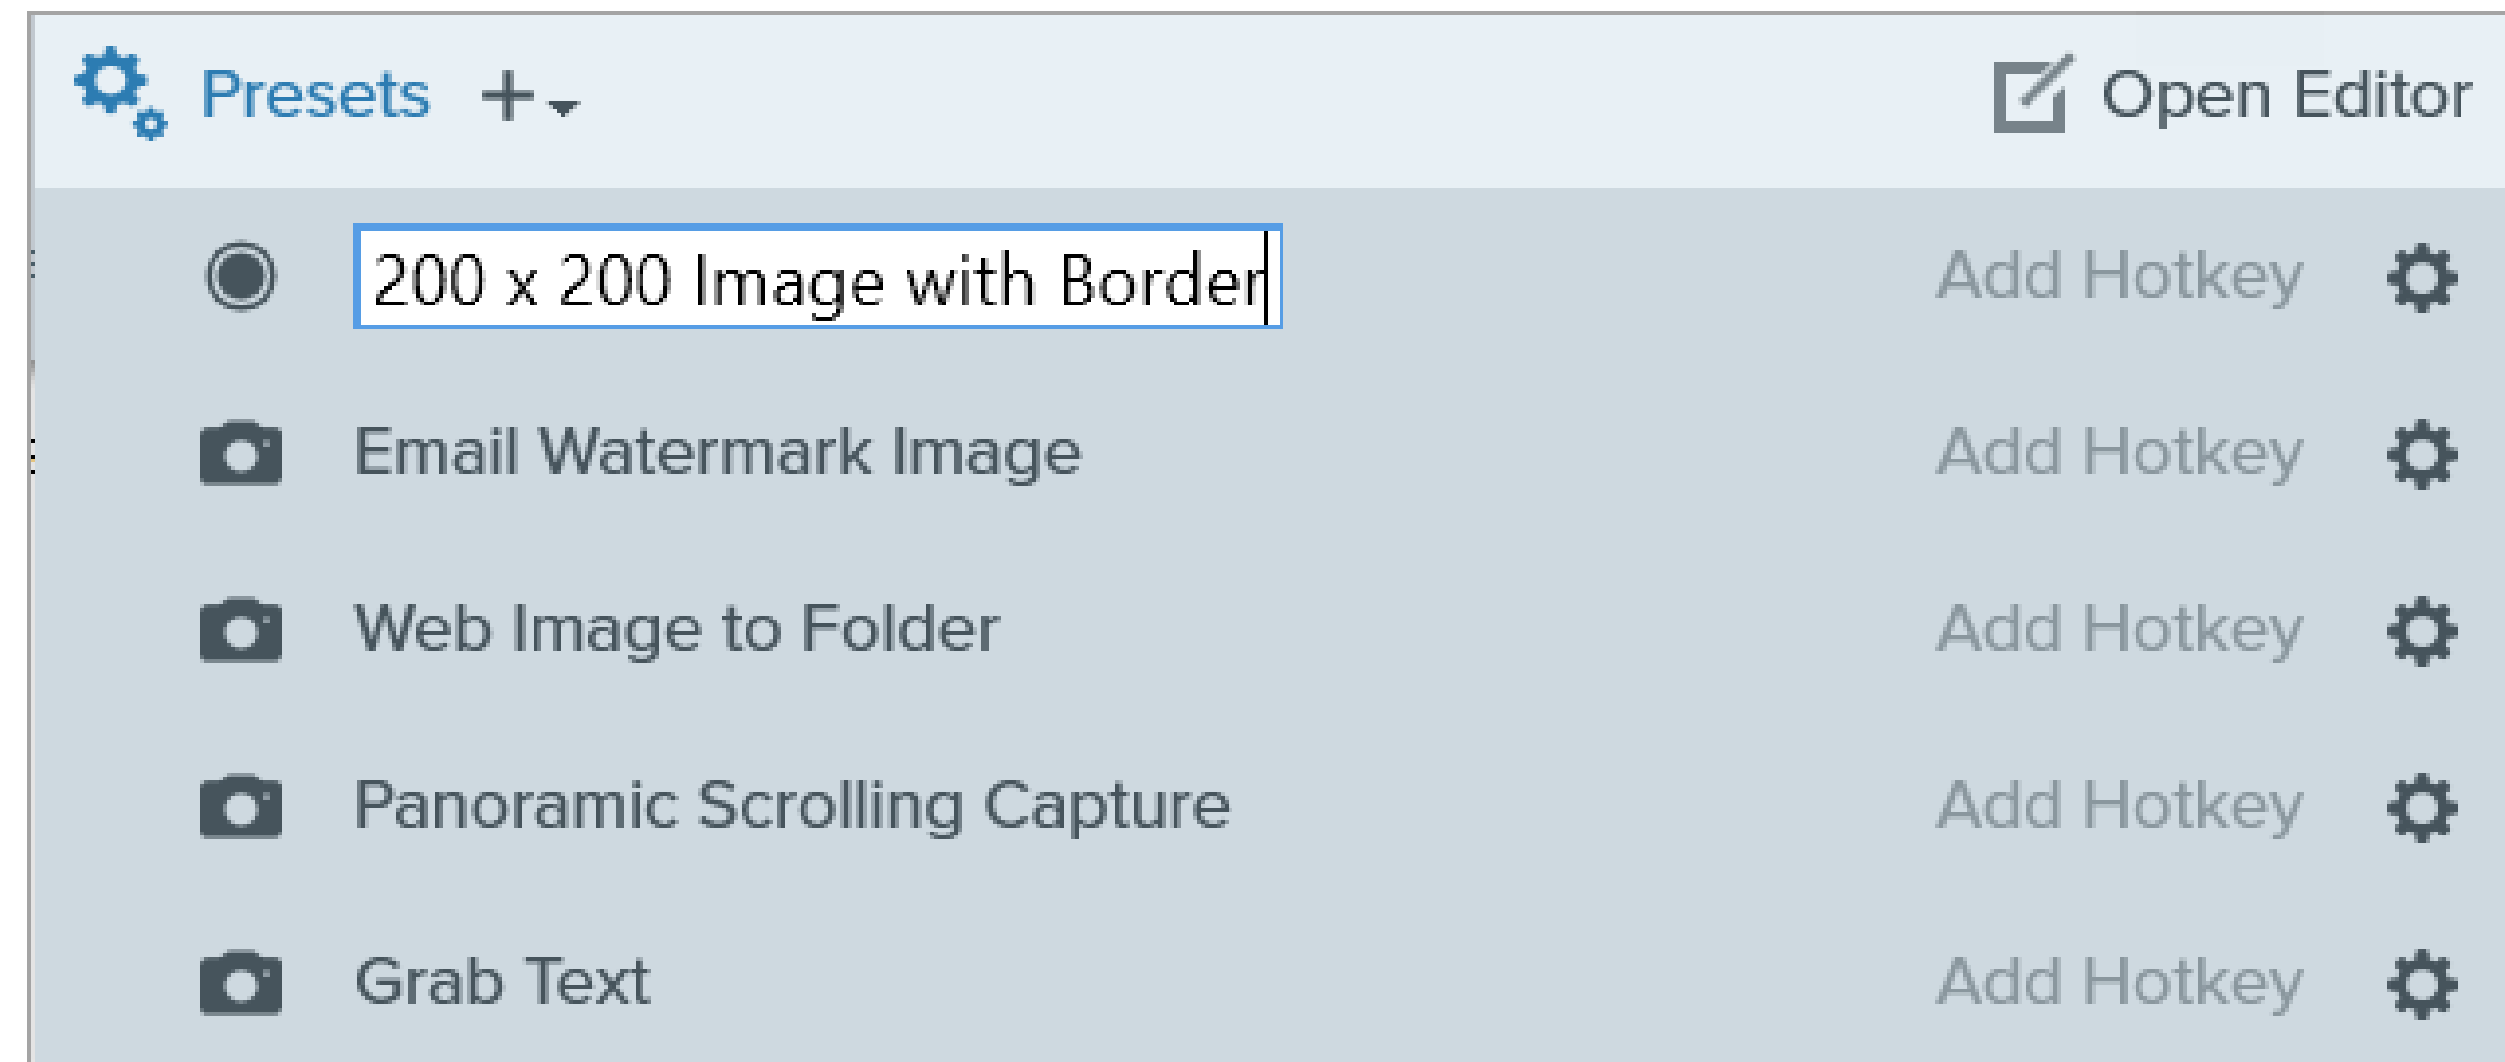

# Add a new Preset

- To assign a keyboard shortcut, click the Add Hotkey (Windows) or + Shortcut (Mac) fields and press the desired key combination on the keyboard.

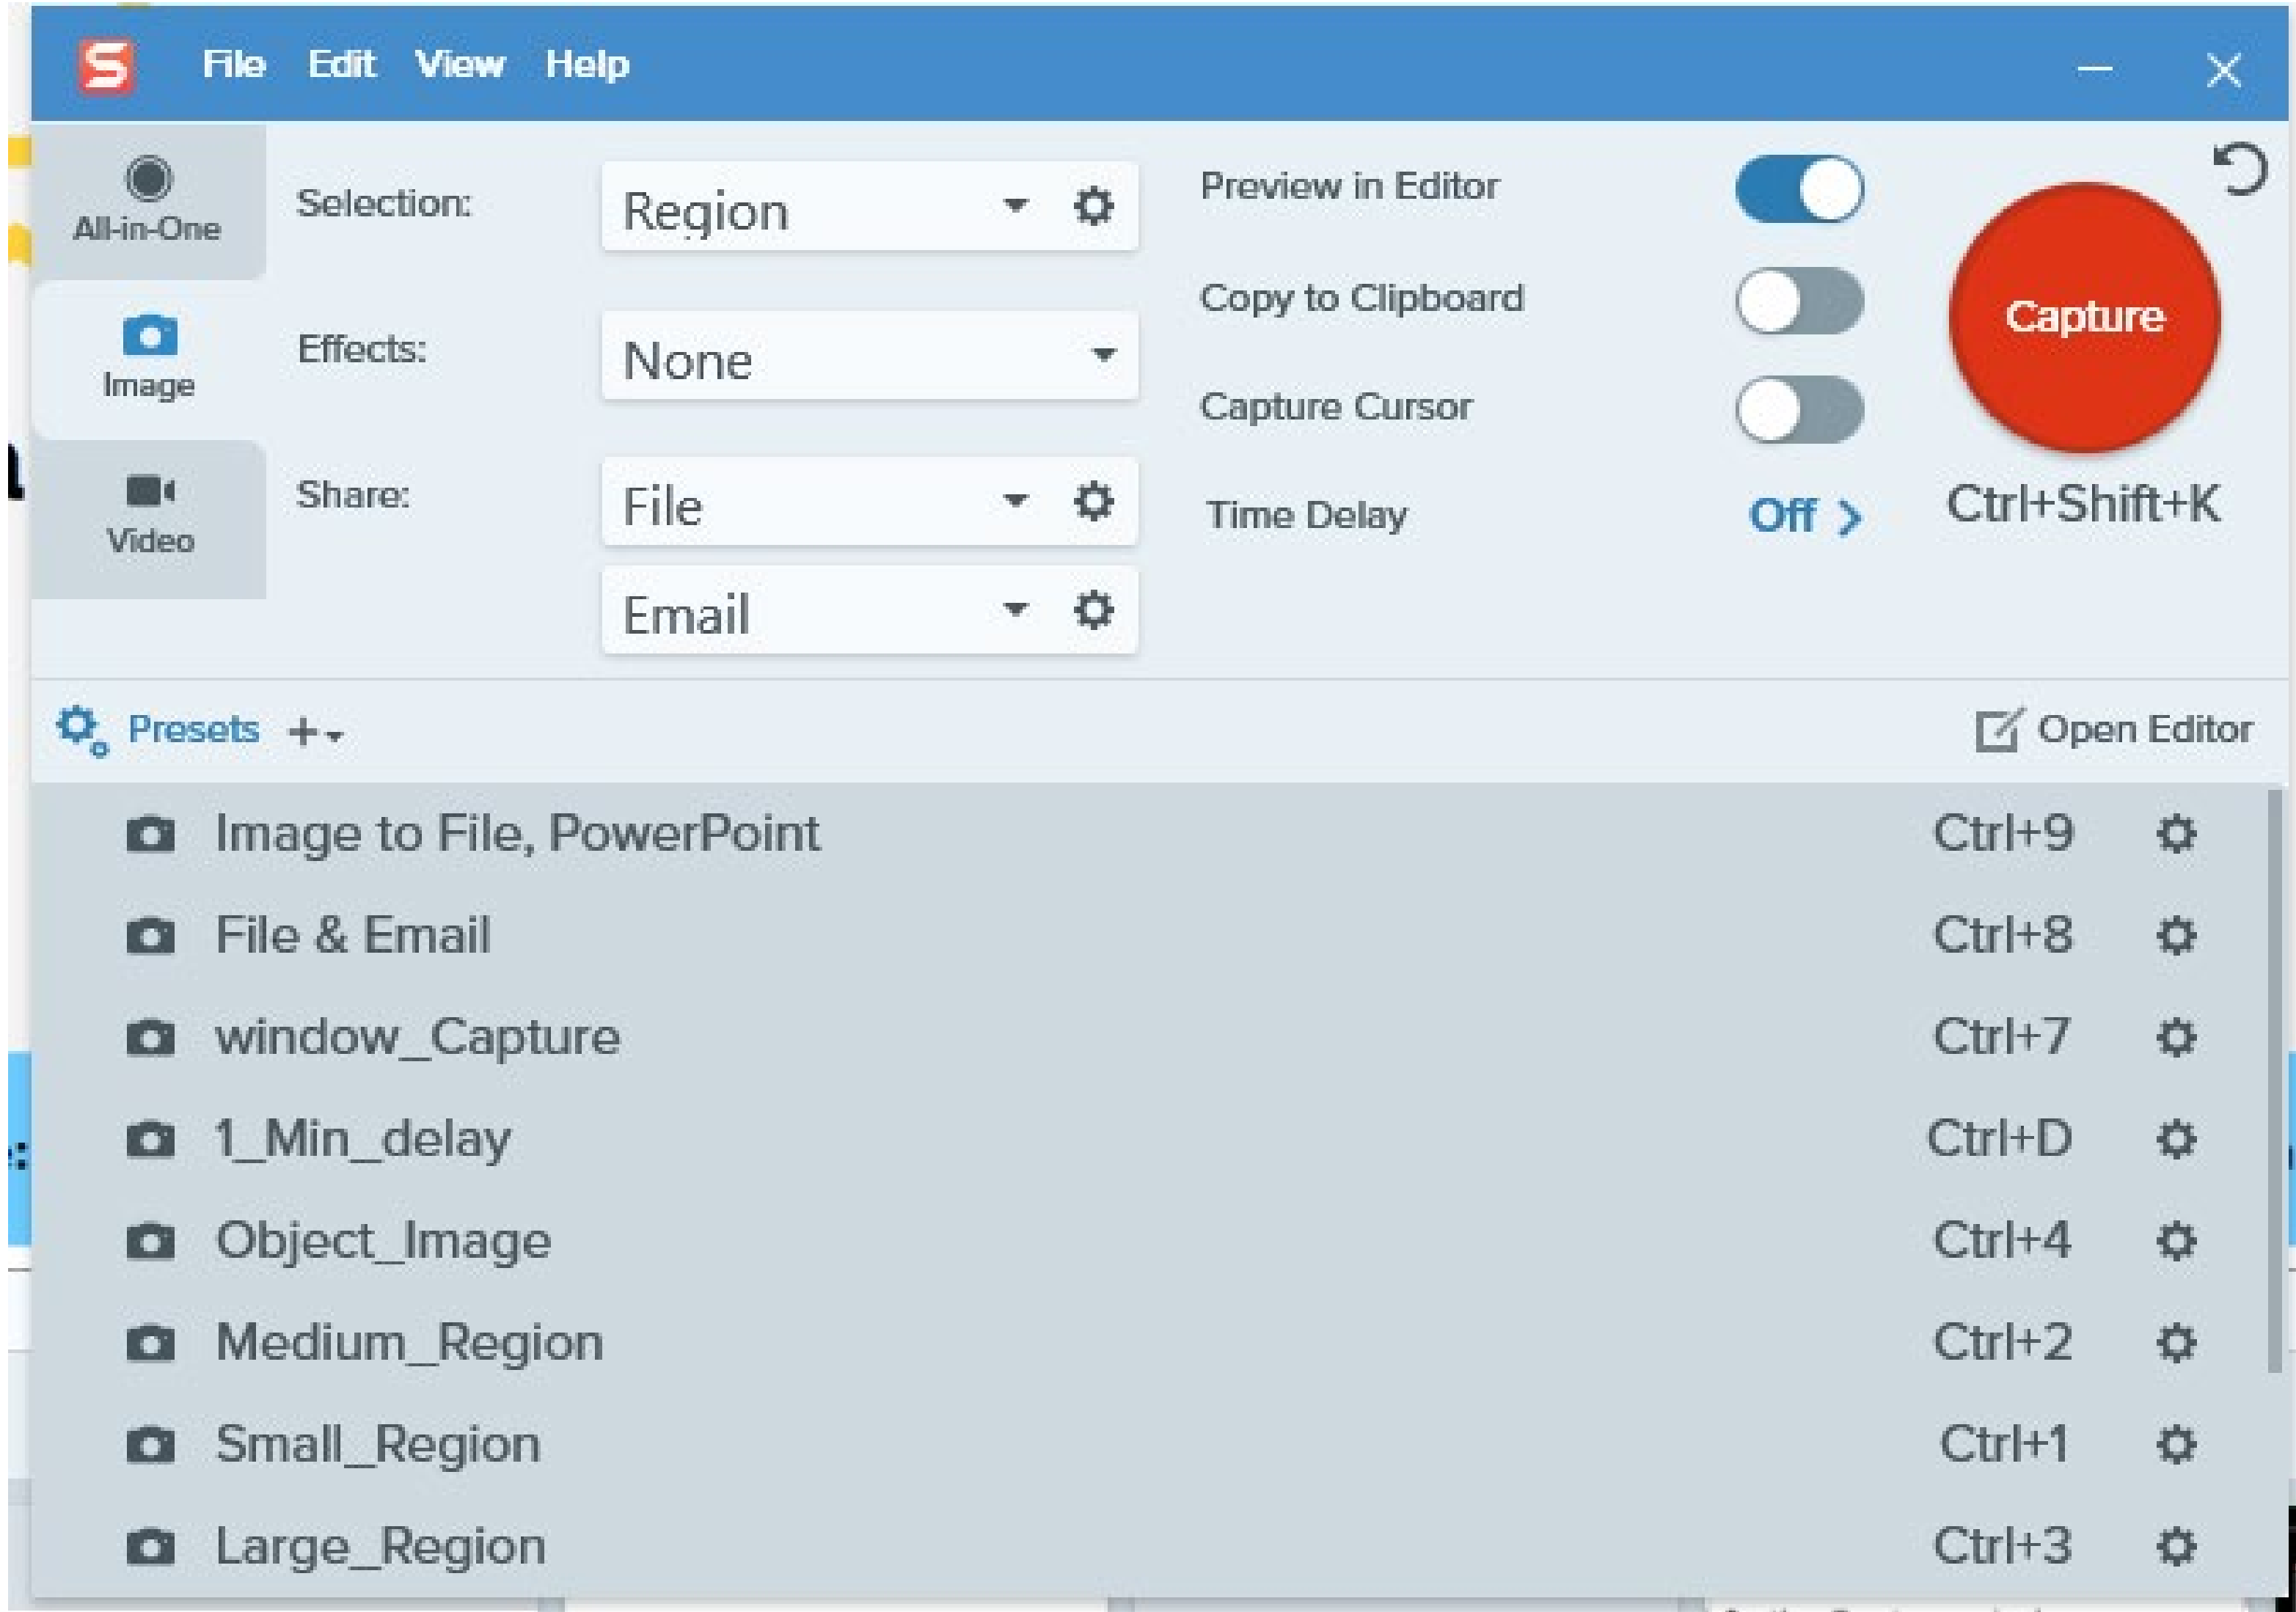

- In the Capture window, adjust the settings to the capture you want to create a preset for. For details about capture settings
- Click the Add Preset dropdown.
- Select the New preset from current settings option from the dropdown.
- A new preset is added to the saved presets list. Type a name for the preset and press Enter.

# Custom Presets

- Best practices for presets:
  1. Be sure to use Hotkeys that are not used by other programs.
  2. Review your presets periodically to make sure that they are still useful.
